

Field Contact Report

Document ID: FC-2022-06-13-TechOps-Secret

Event Date: 2022-06-13

Document Creation Date: 2022-04-11

Target Entity: Cuban DGI

Classification Level: Secret

Mission Priority: 2

Originating Division: Technical Operations

Summary:

This Field Contact Report provides an overview of a June 13th technical surveillance operation targeting a suspected Cuban DGI asset. The operation, codenamed "Operation Eclipse," aimed to assess the asset's communication patterns and determine potential vulnerabilities for future exploitation.

Overview:

On June 13th, 2022, a Technical Operations Division team conducted a surveillance operation on a suspected Cuban DGI asset, codenamed "Cuban-8." The operation involved a combination of visual and technical surveillance techniques, including the use of a concealed listening device and a covertly deployed camera system. The team, consisting of Agents Thompson (Team Lead) and Rodriguez (Technical Specialist), conducted the operation in a secure location near the asset's suspected residence.

Detailed Information:

1. **Asset Identification:** Cuban-8 was identified as a potential Cuban DGI asset through a combination of human intelligence and technical surveillance. The asset was suspected of being involved in a network of Cuban agents operating in the Western Hemisphere.

2. **Operation Objectives:**

- Assess Cuban-8's communication patterns
- Determine potential vulnerabilities for future exploitation
- Gather technical intelligence on the asset's communication equipment

3. **Operation Execution:**

- The team deployed a concealed listening device near the asset's suspected residence to capture audio communications

- A covertly deployed camera system was used to capture visual evidence of the asset's activities
- Agents Thompson and Rodriguez conducted visual surveillance of the asset's suspected residence and surrounding areas

4. Key Findings:

- Cuban-8 was observed to be in contact with a known Cuban DGI operative on multiple occasions
- The asset's communication patterns suggested a high level of security awareness, with frequent changes in communication protocols and encryption methods
- Technical intelligence gathered from the listening device and camera system indicated that the asset was using a custom-built encryption device to protect their communications

5. Recommendations:

- Continue to monitor Cuban-8's communication patterns to gather additional intelligence on the asset's activities and vulnerabilities
- Develop a plan to exploit the asset's communication equipment and gather further technical intelligence
- Consider using alternative methods to gather intelligence on the asset, such as social engineering or
