

## Field Contact Report

**Event Date:** 2020-03-15

**Document Creation Date:** 2021-07-03

**Target Entity:** Soviet Union

**Classification Level:** Confidential

**Mission Priority:** 3

**Originating Division:** Special Projects

**Summary:** This report details a comparative analysis of a recent encounter with asset 'Nightshade-12' in East Berlin, highlighting notable similarities and differences with previous cases.

### Encounter:

On 2020-03-15, Nightshade-12, a deep-cover asset within the East German Stasi, made contact with a Special Projects operative in a secure location within East Berlin. The meeting aimed to discuss the recent Soviet Union's deployment of S-300 surface-to-air missile systems in the region. Nightshade-12 provided valuable insights into the system's capabilities and limitations.

### Comparative Analysis:

This encounter bears striking similarities with the 1972 meeting between Nightshade-12 and a CIA operative in the same location. Both events involved discussions about Soviet military capabilities and the asset's access to sensitive information. However, this recent encounter differs in that Nightshade-12 demonstrated a more cautious approach, citing increased Stasi surveillance and possible mole activities within their organization.

In comparison, the 1968 meeting between asset 'Red-9' and a MI6 operative in Prague showcased a more aggressive approach, with Red-9 providing detailed information on Soviet nuclear doctrine. While both assets demonstrated impressive access to sensitive information, their operational styles and risk assessments differ significantly.

### Unique Features:

The recent encounter with Nightshade-12 highlights the following unique features:

1. **Increased caution:** Nightshade-12's more cautious approach may indicate a shift in their operational tactics, potentially due to the presence of moles within the Stasi.
2. **Stasi surveillance:** The asset's mention of increased Stasi surveillance suggests a heightened awareness of potential security risks, which may impact future operations.

**3. S-300 insights:** The information provided by Nightshade-12 on the S-300 system's capabilities and limitations offers valuable intelligence for NATO's air defense strategies.

### **Differences:**

In comparison to previous cases, this encounter differs in the following ways:

- 1. Operational style:** Nightshade-12's cautious approach contrasts with the more aggressive tactics employed by Red-9 in the 1968 meeting.
- 2. Risk assessment:** The asset's increased awareness of potential security risks and Stasi surveillance may impact the feasibility of future operations.
- 3. Intelligence value:** The information provided on the S-300 system's capabilities and limitations offers unique insights into Soviet military capabilities.

### **Actionable Intelligence:**

Based on this encounter, Special Projects recommends the following:

- 1. Re-evaluate asset risk assessments:** Consider Nightshade-12's cautious approach and potential security risks when planning future operations.
- 2. Investigate Stasi mole activities:** Pursue leads on possible moles within the Stasi to maintain asset security and prevent potential compromise.
- 3. Integrate S-300 intelligence:** Analyze and incorporate the information provided by Nightshade-12 into NATO's air defense strategies to enhance capabilities and counter Soviet military advantages.

### **Distribution:**

This report will be distributed to Special Projects, Research & Analysis, and Counter-Espionage divisions for further analysis and operational planning.

### **Document Control:**

This report is classified Confidential and will be stored in the Central Personnel Archive. Access will be restricted to authorized personnel with a need-to-know clearance.

### **Author:**

Nightingale-7, Senior Case Officer, Special Projects Division
